

Port of Tauranga

UNDERPERFORM

FY19 — Coda've Been More

Port of Tauranga's (POT) FY19 earnings were in-line with market expectations, but of higher quality. While port profitability was strong, group returns were dragged down by losses at JV Coda. Underlying cargo growth has remained above trend for the third successive year, though will slow in FY20 given log export market issues. A lack of operating leverage has been a feature historically, though there is a glimmer of hope in the FY19 result with some core port margin expansion evident. Nonetheless, on a go-forward basis sustainable earnings growth is closer to mid-single digits than double digits and therefore we are still unable to justify current relative valuation levels (~25x EV/EBITDA; ~39x PE) despite the lower bond rate environment. We, hence, retain an UNDERPERFORM rating.

What's changed?

- **Earnings:** Minor immaterial adjustments
- **Target Price:** Increased to NZ\$5.25 from NZ\$4.80 to reflect a lower WACC assumption given risk free rate compression and POT's improved credit rating

Cargo growth to slow

Three years of synchronised cargo growth will likely come to an end in FY20. Log market pressures from lower export prices will temper log exports, despite very strong volumes through July and August. Container growth will continue but is subject to increased competitive tension with Ports of Auckland, as it completes its automation project. In the meantime, POT is being seemingly more aggressive in its approach to pricing than it has been for some time. This may help explain the operating leverage evident in FY19.

Bad year for Coda

JV Coda had a shocker. On a normalised basis it incurred a loss due to entering loss-making contracts, which were exacerbated in an accounting sense by a number of one-off write-offs. POT is confident of returning Coda to profitability in FY20 under new management. Other associate/JV investments were far less eventful. Northport, the largest, experienced a -2% decline in NPAT due to softer log export volumes.

Special dividend to continue but at a lower level

Excess imputation credits and balance sheet capacity has allowed POT to extend its capital management programme for a further four years, though at a lower level of special dividend (2.5c each year compared to 5.0c for the past four years). POT's balance sheet and business outlook has been rewarded by S&P raising its credit rating to A- which will assist financing costs in future.

Investment View

POT has historically traded at a material premium to the market. We expect this to continue given its high returns, longer-term growth outlook, strong management team and operational capability. However, the rate of future profit growth is modest through the cycle rather than strong. With the share price more than factoring in the positives, including potential structural changes in light of the Upper North Island logistics and freight review, our rating is UNDERPERFORM.

Result summary: Strong cargo growth

Port of Tauranga's (POT) FY19 result was in-line with our and market expectations, with NPAT up +7% against the prior year. The robust result was driven by strong cargo growth at the core port operations, up +10% in the year, delivering port EBITDA growth +12%. Log exports grew +12% and containers were up +4%.

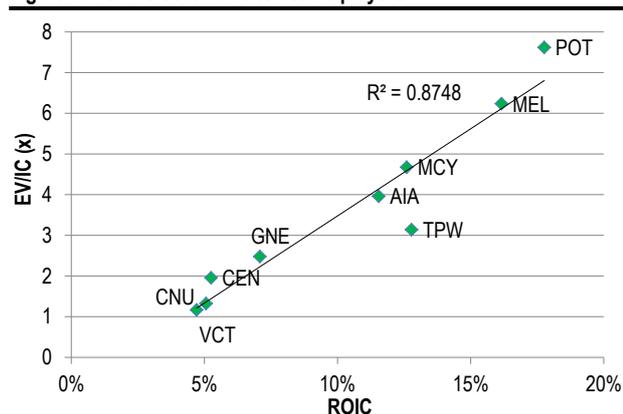

Figure 1. Result summary (NZ\$m)

| | FY18 | FY19 | Change | Forsyth Barr |
|------------------------|-------------|--------------|-------------|--------------|
| Sales revenue | 283.7 | 313.3 | 10.4% | 305.5 |
| EBITDA | 154.1 | 173.2 | 12.4% | 170.2 |
| Associates | 15.1 | 8.1 | -46.5% | 11.0 |
| Reported NPAT | 94.3 | 100.6 | 6.7% | 100.4 |

| Special DPS (cents) | 5.0 | 5.0 | 0.0% | 5.0 |

Source: POT, Forsyth Barr analysis

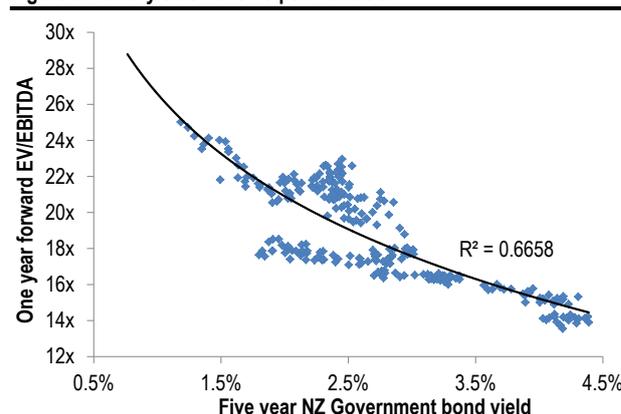

We raise our target price to NZ\$5.25 from NZ\$4.80 due to the lowering of our WACC estimate from 6.9% to 6.3%. However, with POT's earnings growth profile remaining in the +4% to +6% pa range over the medium term and valuation levels stretched we retain an UNDERPERFORM rating.

Earnings revisions

We summarise our earnings forecast changes as shown in Figure 4. Our revised FY20 NPAT forecast implies +6% growth, similar to what POT achieved in FY19, albeit on a lower rate of volume growth as Coda's contribution improves.

Figure 4. Earnings revisions (NZ\$m)

Key result issues

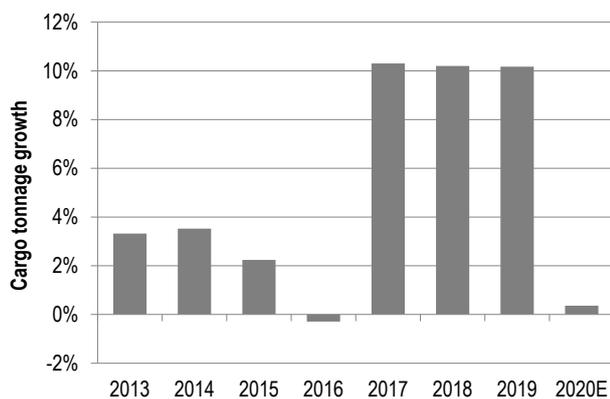

Cargo growth set to slow

POT's cargo growth has been impressive over the past three years. It has consistently driven overall volume (tonnage) by +10% in each year, helped by the synchronisation of log exports and container growth. However, volume growth is likely to slow in FY20, given (1) a likely reduction in log exports — management is guiding to 6.0JASM from 7.1JASM in FY19, and (2) container volume growth has slowed from a multi-year boom of consistent double digit growth following the Kotahi deal in 2014.

While volume growth has been strong, POT has struggled to demonstrate operating leverage in recent years. However, in FY19 port operations EBITDA margin has expanded by +130bps. While some of this expansion was a function of the insurance proceeds from the 2018 fire and has been assisted by favourable mix (strong growth in higher margin logs), we are encouraged by the appearance of operating leverage.

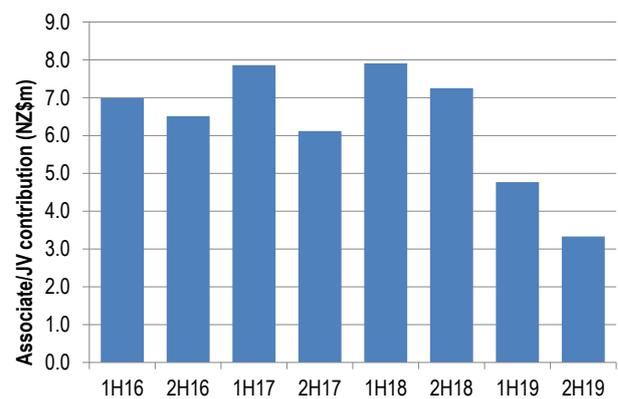

We suspect POT is taking a harder line on pricing. This is difficult to measure beyond its annual tariff sheets given the contractual nature of its concentrated customer base and mix differences within the business; however, management has stated that it's managed to achieve CPI+ pricing with many container shipping customers. A further illustration of this is marine list charges for vessels over 20,000 GT have increased by +22% in FY20.

Figure 5. Cargo growth has been strong but will likely slow in FY20

Source: POT, Forsyth Barr analysis

Figure 6. Associates contribution by half year

Source: POT, Forsyth Barr analysis

Associates drag deeper in 2H19

POT's associate and JV investment income has been severely dented by the Coda contribution, or aptly, lack of contribution given losses in the period. Overall associate income declined NZ\$7.0m to NZ\$8.1m.

Coda's poor performance is exaggerated by (1) NZ\$3.8m of one-off write-offs, and (2) prior year audit adjustments of ~NZ\$2m as acknowledged at the interim result. However, it still generated underlying pre-tax loss of NZ\$1.3m, reflective of loss making contracts. During the year it appointed a new CEO and CFO and expects to return to profitability in FY20.

Other associates have performed more akin to expectations. Northport's contribution was down -2% on -5% lower cargo volumes, and PrimePort Timaru had a strong recovery in reported profitability but on a normalised basis was in line with the prior year.

Special dividend to continue

POT announced a final FY19 dividend of 7.3c (up from 7.0c). In addition, and as expected, the company announced a continuation of its capital management programme (which has paid a 5c special dividend for each of the past four years), however, it will reduce the special dividend to 2.5c and extend the programme for a further four years.

As a result, we expect total dividends per share to fall in FY20 (16.9c) relative to FY19 (18.3c). The total cash dividend yield, therefore, declines to ~2.7% from ~2.9% previously.

Result analysis

| Total bulk tonnage ('000 tonnes) | 11,369 | 12,471 | 10% | |

Source: POT, Forsyth Barr analysis

Investment summary

Port of Tauranga (POT) is a key strategic asset within New Zealand's international export/import supply chain. The company is sensibly pursuing a hub port strategy by investing in capacity and enhancing its cargo aggregation capabilities. However, other ports are also investing which is damaging industry returns given industry overinvestment. While earnings growth recommenced in FY17 after a four year hiatus, we believe current elevated valuation levels are more than reflecting the current modest growth outlook, and therefore rate POT as UNDERPERFORM.

Business quality

- **Hub-port:** POT's strategy evolves around its objective of being New Zealand's hub port. Its favourable draught following recent dredging facilitates bigger ships and greater transshipments from elsewhere in NZ.
- **Multi-year agreements:** POT has long term agreements with key shippers including Kotahi and Zespri. These agreements provide volume certainty.

Earnings and cash flow outlook

- **Earnings growth phase:** After a period of flat earnings during a capex bulge, POT is now leveraging recent investments and growing earnings.
- **Container handling:** POT's business model is focussed on container terminal expansion, container aggregation and inland supply chains. A key requirement of the Kotahi deal was transshipments of South Island exports through Tauranga. This doesn't appear likely near term.
- **Log export volumes:** Higher margin logs represent a key earnings stream. The location of POT and the central North Island forestry harvest profile are supportive to long term log revenues at or around current levels.

Company description

POT is New Zealand's largest port and the major export port. It is majority owned by the Bay of Plenty Regional Council. POT has undergone port expansion in recent years which have facilitated the arrival of bigger ships. Cargo that crosses the wharf includes containers and bulk products including export logs. Given its 10-year arrangement with Kotahi (signed in 2014) it is increasingly exposed to dairy exports. In recent years it has strengthened its cargo aggregation capabilities with its investments in PrimePort Timaru, Rolleston and the Coda JV with Kotahi. POT also owns 50% of NorthPort.

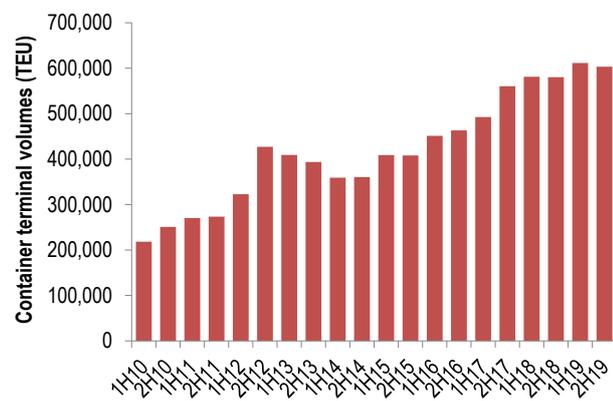

Financial structure

- **Balance sheet:** Net debt has doubled over the past six years given the capex bulge which has facilitated the hub port strategy.
- **Dividends:** POT has extended its special dividend programme for a further four years from FY20 albeit at a lower level than previously (2.5c compared to 5c each year). The current ordinary dividend pay-out is ~90% within the targeted range of 70%–100%.

Risks factors

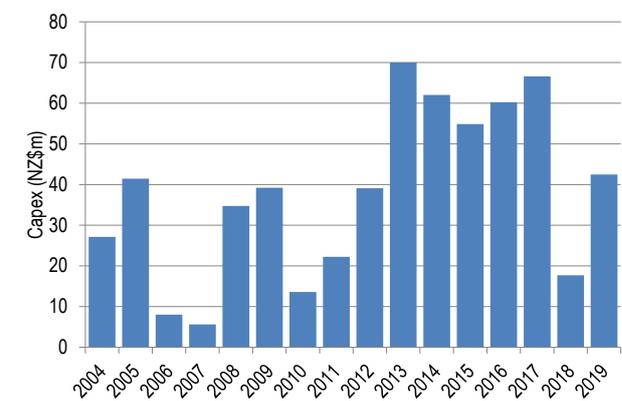

- **Industry competition:** Over investment by other ports is impacting industry ROIC.
- **Chinese log demand:** POT's log exporters are heavily exposed to Chinese construction industry demand for unprocessed timber.
